## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fixed Tightening System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of fixed tightening systems is 44,783 units, with an average selling price of US\$23,000 per unit. A fixed tightening system is an automated tightening device installed on a production line or workstation, specifically designed to provide precise and repeatable torque and angle control on fasteners such as bolts and screws. Unlike handheld or mobile tightening tools, fixed systems are typically integrated into assembly lines and feature a high degree of automation, programmable control, data traceability, and networking capabilities. They are widely used in mass assembly processes in industries such as automotive, aviation, electronics, and food, ensuring consistent preload and quality standards for fasteners. The system typically consists of a servo motor, controller, sensor, tightening spindle, and bracket, enabling multi-axis simultaneous tightening, torque feedback, and error detection. Mainstream companies such as Atlas Copco and Bosch Rexroth can achieve an annual production capacity of approximately 10,000-20,000 single-axis systems and 2,000-5,000 multi-axis systems on a single production line.

The global Fixed Tightening System market size was estimated at USD 1030.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
