Abstracts

Fixed Wireless Access (FWA) is a broadband connectivity solution that uses wireless communication between a fixed point, such as a customer's premises, and a base station, rather than relying on physical cables like fiber-optic or copper lines. It leverages cellular or other dedicated wireless spectrum to deliver high-speed internet access, typically utilizing technologies such as 4G LTE or 5G to provide reliable, low-latency connections suitable for both residential and business use. FWA serves as an alternative to traditional wired broadband, particularly in areas where deploying fiber infrastructure is economically unfeasible or geographically challenging, enabling rapid deployment and scalable internet access without extensive ground-level construction.

The global Fixed Wireless Access (Fwa) market size was estimated at USD 30150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 19.50% during the forecast period.
