Abstracts

PBT is a kind of thermoplastic engineering plastic with excellent comprehensive performance. It is widely used in automobile and electronic appliance manufacturing. However, pure PBT also has the disadvantages of poor flame retardancy, low notched impact strength and low heat distortion temperature. Engineering plastics are generally used to manufacture mechanical parts, containers and packaging substances. They are extensively utilized as a preferred alternative to metal and ceramics due to their lightweight property. Additionally, they provide excellent load capacity, mechanical strength, thermal stability and durability while offering designing flexibility. Some of the commonly used engineering plastics variants include polyamides (PA), polycarbonates (PC), nylon 6, acrylonitrile butadiene styrene (ABS) and polysulphone (PSU). They are widely utilized in the manufacturing of car bumpers, dashboard trims, ski boots, helmets and optical discs across multiple sectors. The global engineering plastics market size reached US\$ 113.6 Billion in 2022, expects the market to reach US\$ 180.2 Billion by 2028, exhibiting a growth rate (CAGR) of 7.31% during 2023-2028.

The global Flame Retardant Polybutylene Terephthalate market size was estimated at USD 1154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
