## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flame Retardant PX200 competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flame retardant PX200, commonly known by its chemical name tetrakis(2,6-dimethylphenyl)1,3-phenylene phosphate, was developed by Daihachi Chemical Industry Co., Ltd. of Japan. It is a solid, halogen-free phosphate flame retardant with excellent thermal stability and hydrolysis resistance. It can be used to flame-retard various engineering plastics. Global production in 2024 was approximately 30,000 tons, with an average selling price of US\$7,800 per ton. The upstream supply of flame retardant PX200 is closely tied to the supply of basic chemical raw materials, primarily phosphoric acid and its derivatives, meta-xylene, and xylene. Raw material production capacity, quality stability, and price fluctuations impact product costs. PX200's downstream applications are widely used in industries with stringent requirements for flame retardancy. As a highly effective flame retardant additive, it is primarily used in engineering plastics (such as PC, ABS, and PPO), but is also suitable for use in thermosetting resins like epoxy and polyester resins, as well as adhesives.

The global Flame Retardant PX200 market size was estimated at USD 234.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
