Flame-retardant synthetic hydrotalcite is a special synthetic material, which is prepared on the basis of synthetic hydrotalcite by adding special ingredients such as flame retardants or modifiers. Flame-retardant synthetic hydrotalcite has good flame-retardant and fire-resistant properties, which can effectively inhibit the spread of flames and reduce fire risks. The main features of flame-retardant synthetic hydrotalcite include: 1. High flame retardancy: flame-retardant synthetic hydrotalcite can effectively inhibit the spread and combustion of flames by adding special ingredients such as flame retardants. It has a high flame retardant index and can meet certain fire protection requirements. 2. Fire resistance: Flame-retardant synthetic hydrotalcite has good fire resistance and can maintain its physical properties and stability in high temperature environments. It can resist high temperature heat radiation and flame erosion, reducing the risk of fire. 3. Chemical stability: Flame-retardant synthetic hydrotalcite has good chemical stability and can resist the erosion of corrosive substances such as acid and alkali. This makes its application in some special environments have certain advantages. 4. Mechanical properties: Flame-retardant synthetic hydrotalcite has certain mechanical properties, such as compressive strength, bending strength, etc. It can provide structural strength and stability to a certain extent. Flame-retardant synthetic hydrotalcites are widely used in construction, electronics, transportation and other fields, such as fireproof boards, fireproof coatings, wire and cable protective layers, etc. Its excellent flame retardant properties make it an important fire protection material that can provide effective fire protection and safety performance.
