Report Overview

Flame Retardant Thermoplastic Elastomer is a type of plastic polymer that has elastic properties similar to rubber but can also resist melting when exposed to high temperatures from flames or other sources of intense heat. These materials are often used in industrial settings where equipment is subjected to extreme heat conditions such as aircraft interiors, automotive components, wiring systems, and many others. They provide both flexibility and durability while reducing the risk of catching on fire which makes them useful for safety applications too. Common examples include TPEs made using polypropylene or styrene-butadiene rubber (SBR) base compounds mixed with additives to increase their thermal stability and reduce degradation under heat stress.
