Abstracts

Flammable Gas MEMS Sensor is a high-sensitivity gas detector based on Micro-Electro-Mechanical Systems (MEMS) technology, capable of real-time monitoring of flammable gases such as methane, hydrogen, and propane. This sensor features a compact size, low power consumption, fast response time, and high stability, making it suitable for industrial safety monitoring, household gas leak detection, and hydrogen monitoring in new energy vehicles. In the past, refrigerant gases used in home and commercial refrigeration and air conditioning equipment were selected based on their ability to work the most effectively at cooling. As the impact of these gases on climate change were realized, researchers began looking for alternative gases that had the same or similar efficiency - but did not contribute to the greenhouse effect. Today there are many new refrigerant gases with low environmental impact. However, some of the replacement gases are toxic and flammable. Therefore it is important when using these new gases that refrigerant leak detector sensors be used.

The global Flammable Gas MEMS Sensor market size was estimated at USD 295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
