### Report Overview

Flange mounted bearings are used when the shaft axis is perpendicular to the bearing mounting surface. They incorporate a sealed bearing that is preassembled into a flanged housing. The housing contains a precision ground surface perpendicular to the bearing axis and two, three or four mounting holes, depending on the style. The bearing can be unbolted and removed, which makes bearing replacement easier and faster than traditional rotary bearings that must be press fit into a housing. Flange mounted bearings can also support heavy loads, which protects the shaft from deflection, which could cause vibration or other damage.
