Abstracts

A flange spreading wedge is a specialized hydraulic tool designed to safely and efficiently separate flanged connections in piping systems, vessels, and other industrial equipment by applying controlled, high-pressure force to create a gap between flange faces without damaging sealing surfaces or compromising bolt integrity. These tools are engineered for use in maintenance, repair, and inspection operations across industries such as oil and gas, petrochemicals, power generation, and water treatment, where they enable faster, safer disassembly compared to traditional methods like sledgehammers or manual pry bars, reducing downtime and minimizing risk of injury or equipment damage.
