Abstracts

Flapper Drone is a kind of bio - inspired unmanned aerial vehicle that flies by flapping its wings, mimicking the flight principles of birds and insects. Its wings flap back and forth to generate lift and thrust. Usually, the wings need to flap 12 times per second to lift the drone. Having four wings, similar to dragonflies, can improve flight stability and power efficiency. The onboard flight computer, based on information from gyroscopic sensors, updates the wing motion parameters as frequently as 500 times per second to precisely control the drone's flight direction and maneuvers. It is mainly used in research, drone shows, and other fields. In research, it can be used for the study of flight control, flight dynamics modeling, and flapping - wing aerodynamics. In drone shows, it can be used to create unique visual effects, such as imitating the flight of birds, butterflies, or fairies, which is suitable for performances in concerts, theme parks, theaters, and other occasions.

The global Flapper Drone market size was estimated at USD 51.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 27.50% during the forecast period.
