Abstracts

Flare gas recovery systems are used in petroleum refineries to reduce flare emissions and offset the plant's purchased fuel gas. The total cost of a project (equipment and installation) is typically recovered in two to three years (sometimes less) depending on system throughput and the value of recovered gas. Increasing power generation applications have been a primary factor fueling the demand for flare gas recovery systems on a global level. A majority of producers re-inject flare gas in natural gas production wells in order to maintain the optimum pressure inside the wells.

The global Flare Gas Recovery Systems market size was estimated at USD 2804.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
