Abstracts

Flash evaporation equipment is a system used to rapidly vaporize a portion of a liquid by exposing it to a sudden drop in pressure, causing the liquid to instantly "flash" into vapor. This process is commonly used in desalination, chemical processing, and power generation to separate components based on their boiling points. The equipment typically includes a chamber where the pressure drop occurs, along with heat exchangers and condensers to manage energy efficiency and product recovery. Flash evaporation is valued for its speed, simplicity, and ability to handle large volumes of liquid with relatively low energy input.

The global Flash Evaporation Equipment market size was estimated at USD 55.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
