Abstracts

Flash field programmable gate array is a combination of field programmable gate array with flash memory. Field programmable gate array architecture is a semiconductor device which is built around a matrix of configurable logic blocks (CLBs) linked through programmable interconnects. This is an integrated circuit which can be programmed later in the field after manufacturing. Increasing adoption of flash field-programmable gate arrays (FPGAs) by cloud consumers as infrastructure-as-a-service (IaaS) resources is expected to drive the market growth rate. Many cloud service providers are organizing Field Programming Gate Arrays to accelerate service-oriented tasks such as web page ranking, high-frequency trading, network encryption, deep learning, memory caching, and video conversion. Amazon, for example, uses this programmable gate array coprocessor in its EC2 F1 virtual machine for consumer hardware acceleration. Furthermore, increasing adoption of artificial intelligence and IoT, faster time-to-market of FPGAs, and ease of programming are other major factors expected to drive the growth rate of the market over the forecast period. The incorporation of such gate arrays into advanced driver assistance systems (ADAS) is also an important factor expected to drive the growth of the flash memory field programmable gate array market.

The global Flash Field Programmable Gate Array market size was estimated at USD 8220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
