## Abstracts

The use of water-based coatings on metal surfaces during the drying process is prone to corrosion due to the presence of water and oxygen, known as flash rust. Flash rust inhibitors are added to water-based coatings to suppress corrosion during the drying process. Global key players of Flash Rust Inhibitor include HALOX (ICL Group), Elementis, Heubach GmbH, Henkel, Lubrizol, etc. The top five players hold a share over 36%. Asia-Pacific is the largest market, has a share about 39%, followed by North America, and Europe, with share 28% and 22%, separately. In terms of product type, Nitrite-containing is the largest segment, occupied for a share of 55%. Flash Rust Inhibitor can be mainly used in Architectural Coatings and Industrial Coatings. Architectural Coatings has a share about 60%. Analysis of market drivers of Flash Rust Inhibitor, 1. Environmental policies force water-based coatings to become popular. VOC regulations upgrade: EU REACH regulations, US CARB certification, etc. require that the VOC content of coatings be less than 30g/L, promoting water-based coatings to replace solvent-based coatings (growth rate exceeds 15%/year). Water-based coatings are prone to flash rust (when humidity > 75%, the risk of flash rust on carbon steel increases by 40%), and flash rust inhibitors are mandatory. 2. Technology upgrade in metal processing industry. Demand for precision parts processing: Lightweighting of automobiles (aluminum alloy usage increases by 8% annually) and 3C electronics (magnesium/titanium alloy shells) have strict requirements for surface rust-free treatment. Adding flash rust inhibitors to cutting fluids can extend the anti-rust cycle of workpieces to 72 hours (traditional processes are only 8-12 hours). 3. Expansion of infrastructure and industrial maintenance scenarios. Demand for marine engineering: Cross-sea bridges and offshore wind power equipment face high salt spray corrosion (Cl<sup>-</sup> concentration > 3.5%), and require long-term flash rust inhibitors (protection cycle > 6 months). Industrial equipment renovation: The market size of steel structure renovation of old factories has increased by 7% year-on-year, and the

penetration rate of water-based primer matching inhibitors has exceeded 65%.4. New inhibitor technology breakthroughMulti-metal compatibility:The fourth-generation inhibitors (such as nitrogen-containing heterocyclic compounds) can protect carbon steel, galvanized sheets, and aluminum materials at the same time, reducing the complexity of the formula by 30%.Intelligent slow-release technology:Microencapsulated inhibitors (particle size
