### Report Overview:

A flat beamsplitter is a polarised optical component that can be used to separate the different polarisation components of incident light. When natural light is incident, the polarisation component (s-light), which is mostly perpendicular to the incident surface, is reflected and the polarisation component (p-light), which is mostly parallel to the incident surface, is transmitted due to the splitting film on the beamsplitter.

The Global Flat Beamsplitter Market Size was estimated at USD 613.28 million in 2023 and is projected to reach USD 812.50 million by 2029, exhibiting a CAGR of 4.80% during the forecast period.
