Abstracts

Flat Bottom Drills are cutting tools designed for specific drilling applications, featuring a flat bottom at the end of the drill, suitable for making precise holes in a variety of materials. This design avoids the deflection or jitter caused by conventional tip drills when contacting the surface, allowing it to work efficiently on uneven surfaces, at staggered angles or thin-walled materials. Flat bottom drills are usually made of high-performance materials such as high-speed steel (HSS) or carbide, and are coated to improve wear resistance and cutting performance.

The global Flat Bottom Drills market size was estimated at USD 375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
