Abstracts

Flat bottom plastic bags, also known as block bottom bags or D-cut bags, are a specialized type of flexible packaging characterized by a flat, stable base that allows them to stand upright without external support. They are typically manufactured from materials such as polyethylene (PE) or polypropylene (PP), often featuring gusseted sides for increased capacity and structural integrity. These bags are widely used in retail, food packaging, and industrial applications due to their durability, printability, and ability to enhance product presentation. Common uses include packaging baked goods, pet food, fertilizers, and consumer goods where shelf stability and branding visibility are important. The flat bottom design distinguishes them from traditional pillow bags by offering improved stacking and display capabilities, making them a preferred choice for products requiring upright storage or point-of-sale appeal.

The global Flat Bottom Plastic Bags market size was estimated at USD 1850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
