Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flat Glass Fiber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flat glass fiber is a type of glass fiber with a flattened, ribbon-like cross-section. Compared to conventional round fibers, it offers a larger surface area and better spreading performance, enhancing interfacial bonding and mechanical strength in composites. Its excellent flatness and resin wettability make it suitable for high-performance composites, electronic substrates, and lightweight automotive components. Flat glass fiber is emerging as a promising material in the composites industry due to its superior surface area, enhanced spreading behavior, and excellent resin wettability. Driven by growing demand for lightweight, high-strength, and eco-friendly materials, flat glass fiber is increasingly used in thermoplastics, electronic substrates, new energy vehicles, wind turbine blades, and high-performance construction reinforcements. In particular, its outstanding interfacial bonding and mechanical reinforcement make it ideal for engineering plastics and thin-wall components. With expanding downstream applications and advancements in processing technologies, the global flat glass fiber market is expected to grow steadily. Asia, especially China, has become the leading production and consumption hub. Looking ahead, the adoption of advanced production lines and automated cutting equipment will further improve product consistency and reduce cost, accelerating the replacement of conventional round fibers in various applications. The market potential for flat glass fiber is significant as it continues to meet evolving performance and environmental requirements across industries.

The global Flat Glass Fiber market size was estimated at USD 160.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the

forecast period.
