Report Overview

A flat grinding machine is a machine tool used for surface grinding, a type of machining process in which a grinding wheel rotates on a horizontal axis to grind flat surfaces. This machine typically has a flat grinding wheel mounted on a spindle and a reciprocating table that moves back and forth under the grinding wheel. The workpiece is placed on the table and fed into the grinding wheel, which removes material to create a flat surface with a high level of precision and smoothness. Flat grinding machines are commonly used in the manufacturing industry for finishing machined parts and components to tight tolerances.
