## Abstracts

A flat head bit is a tool designed for screws with a flat head or Phillips head. It's commonly used in conjunction with power tools like electric screwdrivers for efficient screwing at high speeds. Additionally, it can be manually operated by attaching it to a standard screwdriver with a bit holder. Flat head bits are primarily used for driving flathead screws, but they can also be used with some Phillips head screws. They are less common than Phillips head bits but are particularly useful in environments where dust and debris are prevalent, such as kitchens, bathrooms, and around pipes, due to their simple design that resists clogging.

The global Flat Head Bit market size was estimated at USD 635.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
