## Abstracts

Flat Panel Satellite Antenna is composed of many radiating elements that can be thought of as numerous, tiny, fixed antennas. Each one has a phase shifter which forms beams by shifting the phase of the signal emitted from each of the radiating elements (tiny antennas). This provides a constructive/destructive interference which may be used to steer the beam(s) in a particular direction. Growing investments in space exploration and satellite launches, rising demand for electronically steered antennas worldwide, rising demand for innovative and compact antenna systems, and growing adoption of low cost, low profile antennas in various commercial and military applications will drive the demand for this market in the near future. The deployment of low earth orbit (LEO) satellites and constellations of satellites for communication applications has increased their demand across the globe. Other factors driving the market growth include growing demand for Ku- and Ka-band satellites, and the growing fleet of autonomous and connected vehicles used for various applications in the military and commercial sectors, which require customized flat panel antennas.

The global Flat Panel Antennas for Satellite market size was estimated at USD 447.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 38.80% during the forecast period.
