Abstracts

Flat-Top Converters are specialized optical devices used to shape and manipulate laser beams, typically converting a Gaussian beam profile into a flat-top beam profile. In other words, these converters transform the natural bell-shaped intensity distribution of a laser beam into a flat, uniform intensity profile across the entire beam cross-section. This can be highly beneficial in various applications where a uniform light distribution is required for more efficient or uniform processing. The primary purpose of a flat-top converter is to improve the uniformity of the laser beam, which is crucial in applications such as material processing, laser cutting, surface treatment, medical treatments, and optical testing.

The global Flat-Top Converter market size was estimated at USD 56.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
