## Abstracts

Flavonoids are water soluble polyphenolic molecules containing 15 carbon atoms. Flavonoids belong to the polyphenol family. Flavonoids can be visualized as two benzene rings which are joined together with a short three carbon chain. One of the carbons of the short chain is always connected to a carbon of one of the benzene rings, either directly or through an oxygen bridge, thereby forming a third middle ring, which can be five or six-membered. The flavonoids consist of 6 major subgroups: chalcone, flavone, flavonol, flavanone, anthocyanins and isoflavonoids. Global Flavonoids key players include SANREN Bio-Technology, Chengdu Shuxi Pharmaceutical, Chengdu Okay, Hunan Kang Biotech, Hunan Yuantong Pharmaceutical, etc. Global top five manufacturers hold a share nearly 40%. Europe is the largest market, with a share over 35%, followed by China, and North America, both have a share about 50 percent. In terms of product, Hesperidin is the largest segment, with a share about 80%. And in terms of application, the largest application is Pharmaceutical, followed by Food and Beverages, Dietary Supplements, Feed Additives, etc.
