Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flexible Bending Center competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The flexible bending center is an advanced metal processing equipment specially designed for efficient and precise bending of metal materials. Compared with traditional bending machines, the flexible bending center usually integrates a variety of automation technologies, can handle workpieces of different shapes and sizes, and has high flexibility and production efficiency. As an advanced sheet metal forming equipment integrating automation, intelligence and high flexibility, the flexible bending center is gradually replacing traditional manual bending or ordinary CNC bending machines, and is widely used in industries such as electrical cabinets, kitchenware, air conditioners, elevators, and medical equipment. With the accelerated advancement of intelligent manufacturing, rising labor costs, and the growing demand for small batch and multi-variety production, the market demand for flexible bending centers has grown rapidly, especially under the trend of "machine replacement". At present, domestic brands are rising, technology is constantly breaking through, and the product structure is becoming increasingly diversified, gradually replacing imported equipment. However, the industry still faces challenges such as high initial investment, complex programming, and uneven after-sales service capabilities. In the future, the industry will develop in the direction of AI path planning, intelligent tool recognition, and flexible production line integration, while exploring the business model of "equipment + software + service" integration or even "equipment as a service".

The global Flexible Bending Center market size was estimated at USD 565.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70%

during the forecast period.
