Abstracts

Flexible employment refers to four forms other than full-time labor employment: including flexibility in time represented by part-time employment; flexibility in employment forms represented by labor dispatch; flexibility in service forms represented by business outsourcing Flexible; the flexibility in the form of employment represented by platform-based employment. Flexible employment services include personnel outsourcing, job outsourcing, project outsourcing, business process outsourcing, part-time dispatch and global talent migration and other service modes. The flexible employment sector is highly dependent on economic development, and as the economy grows, the demand for flexible workers increases, and vice versa. With economic growth expected to slow sharply from 4.2% in 2022 to 0.4% in 2023, demand for flexible workers is also falling. In addition, a structurally tight labor market is holding back economic growth. New regulations are also putting pressure on the profit models of many resilient companies. The Resilience Group expects companies to initially remain reluctant to hire flex workers in the first half of 2023 due to heightened recession risks. As a result, less than half of entrepreneurs in the gig industry expect to achieve higher turnover in 2023. The secondment of specialist casuals and tight positions is expected to continue to be a "booming business" in 2023. The biggest challenge facing the temporary employment sector is labor market shortages. Although the unemployment rate is expected to rise slightly in 2023, the labor market will remain structurally tight in the coming years, partly due to an aging population.

The global Flexible Employment market size was estimated at USD 1895.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.80% during the forecast period.
