Abstracts

Flexible graphite foil, also known as expanded graphite foil or flexible graphite sheet, is a highly versatile industrial material manufactured through the exfoliation and compression of natural flake graphite into thin, pliable sheets without the use of binders or resins. This material exhibits exceptional thermal conductivity, high-temperature stability (operating up to 3,000°C in inert atmospheres and 450°C in oxidizing environments), chemical inertness, and superior sealing properties due to its ability to conform to irregular surfaces and maintain integrity under compression. It is widely utilized across various sectors, including as gaskets and seals in automotive and aerospace applications, thermal management solutions in electronics, furnace and high-temperature equipment insulation, and as a critical component in fuel cells and industrial sealing systems where resilience to extreme conditions is required.

The global Flexible Graphite Foil market size was estimated at USD 350.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
