Abstracts

Flexible grinding wheels, also known as depressed center wheels or Type 27 wheels, are abrasive tools characterized by their reinforced fiberglass backing and flexible design, which allows them to conform to contoured surfaces and withstand side pressure during grinding, cutting, and finishing operations. These wheels are widely used across metalworking, fabrication, construction, and automotive industries for tasks such as weld removal, surface blending, and material shaping. Their flexibility, combined with durability and resistance to breakage, makes them suitable for both handheld and stationary power tools, offering versatility in applications ranging from heavy-duty stock removal to precision finishing. Key materials abraded include steel, stainless steel, aluminum, and other metals, with variations in grit size, bonding agents, and abrasive grains (such as aluminum oxide or zirconia alumina) tailored to specific performance requirements.

The global Flexible Grinding Wheel market size was estimated at USD 1024.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
