Abstracts

Flexible hybrid electronics (FHE) is a novel approach to electronic circuit manufacturing that aims to combine the best of printed and conventional electronics. Conductive interconnects, and as many additional components as possible, are printed onto a flexible substrate, whereas the IC (integrated circuit) is produced separately using photolithography and then mounted (usually as a bare die, without packaging). This resulting hybrid of 'printed' and 'placed' functionality provides the flexibility long associated with printed electronics, but with the processing capability of an integrated circuit. The Flexible Hybrid Electronics (FHE) market is experiencing rapid growth, driven by the increasing demand for lightweight, flexible, and high-performance electronic devices across various industries. FHE combines the advantages of printed electronics with the processing power of conventional integrated circuits, enabling the development of innovative applications in wearables, smart textiles, healthcare devices, automotive electronics, and flexible displays. The market is supported by advancements in materials science, as well as the growing adoption of Internet of Things (IoT) devices and the trend toward miniaturization in electronics. The flexibility, reduced weight, and customization potential of FHE make it ideal for applications requiring both functionality and flexibility, such as medical sensors, flexible solar panels, and bendable consumer electronics. Additionally, the technology offers cost-effective manufacturing processes, which is expected to drive further adoption in the consumer electronics sector. While challenges remain, including the need for improved durability and scalability, the market outlook for FHE is positive, with increasing investment in R&D and ongoing technological innovations expected to expand its application base in the coming years.

The global Flexible Hybrid Electronics (FHE) market size was estimated at USD 68.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.60% during the forecast period.
