Abstracts

Flexible In Mold Coatings (FIMC) refer to advanced polymer-based coatings applied directly onto a substrate within the molding process, combining decoration, protection, and surface finishing into a single manufacturing step, thereby eliminating the need for secondary painting or finishing operations. These coatings are engineered to maintain flexibility, durability, and adhesion even on complex or contoured surfaces, making them particularly suitable for applications such as automotive interiors, consumer electronics, and household appliances where both aesthetic appeal and functional performance—such as resistance to scratches, chemicals, and UV degradation—are critical.
