Report Overview

Flexible isolators are specialized containment systems designed to provide a barrier between operators and potentially hazardous materials, such as pharmaceutical powders or chemicals, during various processes like handling, mixing, or transferring. These isolators are typically made of flexible materials like PVC or polyurethane, allowing for easy manipulation and adaptation to different equipment and processes. The primary function of flexible isolators is to protect operators from exposure to harmful substances while also preventing contamination of the surrounding environment. They are commonly used in industries such as pharmaceutical manufacturing, biotechnology, and chemical processing where maintaining a sterile and controlled environment is crucial.
