Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flexible Photovoltaic Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flexible Photovoltaic Films are lightweight, bendable solar power materials made from CIGS, amorphous silicon, organic, or perovskite semiconductors. Unlike traditional rigid silicon panels, they are easy to install, adaptable to curved surfaces, and ideal for portable or integrated solar energy applications such as buildings, vehicles, and IoT devices. In 2024, global Flexible Photovoltaic Films production reached approximately 2.3 million m², with an average global market price of around US\$480 per m². The overall gross profit margin of the industry is approximately 22-30%, with perovskite products achieving 35-40% due to process differences and high conversion efficiency. CIGS and a-Si products have a gross profit margin of approximately 18-25%. Upstream: Thin film substrates (polyimide PI, PET, PEN), transparent conductive films (ITO, AgNW), perovskite/semiconductor light-absorbing layer materials, vacuum coating equipment. Midstream: Flexible solar cell manufacturers, packaging module manufacturers, photovoltaic backsheet and electrode material suppliers. Downstream: Building-integrated photovoltaics (BIPV), automotive rooftop photovoltaics, wearable devices, mobile power supplies, drones, and IoT energy modules, etc.

The global Flexible Photovoltaic Films market size was estimated at USD 1126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
