Report Overview

A Flexible PV Cell, or Photovoltaic Cell, is a type of solar energy technology that converts sunlight into electricity. It is designed with a flexible structure, allowing it to be bent or curved without compromising its functionality. This flexibility is achieved through the use of lightweight, pliable materials, such as thin-film semiconductors or certain polymers, which are integrated into the cell's construction. The primary advantage of a Flexible PV Cell is its adaptability, enabling it to be integrated into a variety of applications where rigid panels are not suitable, such as on curved surfaces, portable devices, or even wearable technology. These cells typically have a lower efficiency compared to their rigid counterparts, but their unique properties make them valuable in specific scenarios where flexibility is a critical requirement.
