## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flexible Single Beam Crane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flexible single-beam crane is a bridge-type lifting equipment composed of a light flexible track system, usually composed of a single main beam, electric hoist, trolley, track system and supporting structure. Compared with traditional rigid structure cranes, flexible single-beam cranes have the characteristics of light structure, smooth operation, flexible installation and diverse layout. They are particularly suitable for small and medium tonnage (generally 0.125 tons to 2 tons) and frequent lifting operations. Flexible single-beam cranes can choose hanging or self-supporting installation methods according to workshop conditions. They are not dependent on the factory structure and are also convenient for station expansion and track extension. In addition, its modular track design supports functions such as multi-station linkage, cross operation, and track customization, which greatly improves the lifting efficiency and operation safety. Modern flexible lifting systems are usually equipped with intelligent devices such as frequency conversion control, electronic anti-sway, and anti-collision to meet the needs of high-beat and refined production environments. They are important lifting solutions for realizing modern lean production and flexible manufacturing.

The global Flexible Single Beam Crane market size was estimated at USD 645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
