Abstracts

Flexible Solar Panel is a kind of thin film solar cell. Flexible solar panels can, as their name suggests, flex. They are also very lightweight and these two characteristics make them useful for camping, rapid transport and deployment in emergencies, and for use on caravans, vehicles, and even airplanes. On buildings they can be applied to curved surfaces or structures where weight is an issue. As they can be glued directly to the surface, existing penetrations don't need to be used or new penetrations made. Global Flexible Solar Panel key players include Uni-Solar, MiaSol?, Global Solar, SoloPower Systems, etc. Global top four manufacturers hold a share nearly 70%. United States is the largest market, with a share about 80%, followed by Europe, and Japan, both have a share about 15 percent. In terms of product, Copper Indium Gallium Selenide (CIGS) is the largest segment, with a share over 55%. And in terms of application, the largest application is Commercial, followed by Mobile, Residential, etc.

The global Flexible Solar Panel market size was estimated at USD 569.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
