Abstracts

Flexible Spoolable Pipes (FSPs) are lightweight, flexible, and durable pipes designed primarily for transporting fluids and gases in various industries, especially in oil and gas. Unlike traditional steel pipes, these pipes are constructed from composite materials such as thermoplastics reinforced with fibers, providing greater flexibility and corrosion resistance while being easy to transport and install. They are typically manufactured in long continuous lengths that can be spooled, which simplifies storage and reduces the need for multiple joints or welds.

The global Flexible Spoolable Pipes market size was estimated at USD 579.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
