Abstracts

Flexography print labels, often referred to as flexo labels, are a type of printed packaging label produced using the flexographic printing process, which employs flexible photopolymer plates mounted on rotating cylinders to transfer fast-drying, low-viscosity inks onto a wide variety of substrate materials such as paper, film, foil, and non-woven materials. This method is particularly valued for its efficiency in high-volume production runs, cost-effectiveness, and ability to print on non-porous surfaces, making it ideal for applications in industries like food and beverage, pharmaceuticals, personal care, and household products where durable, vibrant, and consistent labeling is required for primary packaging, shipping, and branding purposes.
