Report Overview

Flight Training Devices (FTDs) are advanced simulation systems designed to replicate the experience of flying an aircraft. These devices are used for training pilots in a safe and controlled environment, allowing them to practice various maneuvers, emergency procedures, and scenarios without the need to use an actual aircraft. FTDs come in different levels of complexity, from basic trainers to full-flight simulators that closely mimic the cockpit of specific aircraft models. They are an essential tool in pilot training programs, providing a cost-effective and efficient way to enhance pilot skills and knowledge.

The market for Flight Training Devices is experiencing significant growth due to several key trends and market drivers. With the increasing demand for air travel and the global pilot shortage, there is a growing need for trained pilots across the aviation industry.
