Abstracts

Forward-looking infrared (FLIR) & laser designator uses a thermographic camera that senses infrared radiation and a laser light source is used to designate a target. Targeting pods are target designation devices that identify & guide weapons on the designated target. Moreover, targeting pods can be used as surveillance system to detect, auto-track, and identify targets over long distances utilizing laser spot tracker for receiving reflected range-finder signal. Targeting pods come with cutting-edge capabilities, including built-in GPS, which gives users access to exact target location information and the ability to save and exchange data with other users via wired and wireless connections for improved communication. They also enable users to get clear pictures of targets on touchscreen color displays. Thanks to their Ground Moving Target Indication (GM TI) feature, targeting pods can identify moving ground vehicles. They also provide the option to record mission histories, letting users to save a lot of information. Furthermore, other drivers include ongoing research and development, expanding SWIR and MMP applications, and rising military aircraft purchases by various nations. As a result, demand for FLIR and Laser designator targeting pods is increasing throughout the projection period due to the rising terrorist activities. Thus driving the FLIR & Laser Designator Targeting Pods market revenue.
