The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Float Glass Cutting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global float glass cutting machine production reached approximately 1756 units, with an average global market price of around K US\$ 96 per unit. Float glass cutting machine is specially designed for cutting float glass processing equipment. Float glass is formed by floating molten glass on the surface of tin liquid. It has the characteristics of smooth surface, high transmittance and small optical distortion. It is widely used in buildings, automobiles, furniture and other fields. The cutter cuts float glass precisely by mechanical or laser means to meet the requirements of different size and shape, which is the first key process of glass deep processing. The annual production capacity of a single float glass cutting machine line typically ranges from 50 to 80 units, with a gross profit margin of around 25%. Downstream consumption of float glass cutting machines is 41% in construction, 28% in transportation, 9.5% in electronics, 16% in photovoltaics, and 5.5% in other industries. Market Concentration and Key Players: From an international perspective, float glass cutting machine market concentration is relatively high, mainly concentrated in developed countries in Europe. For example, large manufacturers such as Biesse and LiSEC; from the domestic point of view, float glass cutting machines still have a lot of room for development. Manufacturing Process and Market Trends: Float glass cutting machine manufacturing process involves precision mechanical engineering and automation control technology depth fusion, its core lies in building a high rigidity and stable motion platform and integrated high precision numerical control system, key executive components such as tool selection and pressure control directly affect the cutting quality, equipment is usually equipped with automatic edge finding and visual

positioning system to adapt to large-scale continuous production, while advanced stress monitoring function helps to reduce the glass in the process of damage rate, The overall process is to achieve micron cutting accuracy and good section effect at high speed. The current market trend shows that the demand for glass processing efficiency and customization in the downstream construction, automobile and photovoltaic industries continues to rise, which directly promotes the development of cutting equipment to a higher degree of intelligence and flexibility. Models integrating machine vision and artificial intelligence algorithms are becoming the mainstream of the market. They can automatically identify defects and optimize cutting paths to improve material utilization. In addition, with the expansion of the application of special glass such as ultra-thin and ultra-thick glass, Multi-axis linkage and laser cutting and other new technology integration equipment show growth potential, the future market competition will not only be limited to equipment performance but also extend to all-round digital solutions and technical service capabilities, the whole industry presents an overall trend of accelerating evolution towards green, efficient and intelligent integration.

The global Float Glass Cutting Machine market size was estimated at USD 169.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
