Abstracts

A floating hydrogen refueling station is a facility specially designed to provide hydrogen refueling services for hydrogen fuel cell ships or other hydrogen energy equipment. It is usually installed on a floating platform for operation in a water environment. This type of hydrogen refueling station meets the hydrogen refueling needs of hydrogen energy equipment by storing and transporting hydrogen. It is an important infrastructure for promoting the application of hydrogen energy and the development of clean energy transportation on water. With the continuous advancement and application promotion of hydrogen energy technology, the design, construction and operation costs of floating hydrogen refueling stations are gradually decreasing. At the same time, the research and development and application of new hydrogen refueling technologies (such as high-pressure hydrogenation and low-temperature hydrogenation) have also improved the refueling speed and hydrogen utilization efficiency. With the increasing number of hydrogen fuel cell ships and the increasing application of hydrogen energy, the market demand for floating hydrogen refueling stations is also continuing to grow. Especially in the fields of water transportation and industrial applications, floating hydrogen refueling stations have broad market prospects.

The global Floating Hydrogen Refueling Stations market size was estimated at USD 623.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
