Abstracts

A Floating LNG Power Plant (FLNGPP) refers to a self-contained, ship-based facility that integrates the regasification of liquefied natural gas (LNG) with the generation of electrical power, typically utilizing gas turbines or engines. These mobile units are designed to provide flexible, scalable, and rapidly deployable energy solutions, particularly in regions lacking established onshore infrastructure, such as remote islands, coastal areas, or disaster-stricken zones. The core components include LNG storage tanks, regasification systems, power generation units, and often substations for grid connection, enabling the delivery of electricity directly to local networks without the need for extensive pipelines or permanent land-based facilities.

The global Floating Lng Power Plant market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
