Report Overview

Floating photovoltaics (FPV), sometimes called floatovoltaics, is solar panels mounted on a structure that floats on a body of water, typically a reservoir or a lake. Floating solar systems help landowners benefit from otherwise underused bodies of water, such as coal quarries, mineral extraction pits or reservoirs. As opposed to conventional rooftop solar panels, floating ones perform between 5% to 15% better because of the cooling effect of the water, and are not impacted by shading from other buildings.

The global Floating Photovoltaics (Fpv) market size was estimated at USD 367.84 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 16.75% during the forecast period.
