Abstracts

Floating power plant plays a crucial role in electricity generation at remote areas where power generation is restricted due to scarcity of land mass. Shortage of electricity or the lack of access is one of the major development hurdles faced by many regions in developing countries. Moreover, in many countries, certain regions are not connected with their national distribution grid and off grid power is their only source of energy. In addition to that, growing concern about climate change and global warming are increasingly forcing nations to switch to renewable energy sources to meet their respective climate change targets. Asia-Pacific is anticipated to dominate the global floating power plant market owing to the increasing renewable floating power plants in countries such as Japan, China.

The global Floating Power Plant market size was estimated at USD 1134.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
