Report Overview

Floatovoltaics is solar panels mounted on a structure that floats on a body of water, typically a reservoir or a lake. Floating solar systems help landowners benefit from otherwise underused bodies of water, such as coal quarries, mineral extraction pits or reservoirs. As opposed to conventional rooftop solar panels, floating ones perform between 5% to 15% better because of the cooling effect of the water, and are not impacted by shading from other buildings.

This report offers a comprehensive and in-depth analysis of the global Floating Solar Plants market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
