Abstracts

Floating solar platforms, also known as floating photovoltaic (FPV) systems, are solar panel arrays mounted on buoyant structures that enable electricity generation on bodies of water such as reservoirs, lakes, ponds, and calm coastal areas. These systems are designed to be durable, corrosion-resistant, and environmentally adaptive, often incorporating features like mooring systems to secure them in place and specialized materials to withstand aquatic conditions. By utilizing otherwise underused water surfaces, floating solar platforms help conserve land resources, reduce water evaporation from reservoirs, and potentially improve panel efficiency due to the cooling effect of water.

The global Floating Solar Platform market size was estimated at USD 765.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
