Report Overview:

Floating solar or floating photovoltaics (FPV), sometimes called floatovoltaics, is solar panels mounted on a structure that floats on a body of water, typically a reservoir or a lake. Floating solar systems help landowners benefit from otherwise underused bodies of water, such as coal quarries, mineral extraction pits or reservoirs. As opposed to conventional rooftop solar panels, floating ones perform between 5% to 15% better because of the cooling effect of the water, and are not impacted by shading from other buildings.

The Global Floating Solar System Market Size was estimated at USD 345.89 million in 2023 and is projected to reach USD 791.76 million by 2029, exhibiting a CAGR of 14.80% during the forecast period.
