Report Overview

Flocculants are chemicals that promote flocculation by causing colloids and other suspended particles in liquids to aggregate, forming a floc. They are used in water treatment processes to improve the sedimentation or filterability of small particles. Flocculant, or pool floc, is a chemical that you add to your pool when other methods of clearing it up aren't working. The flocculants clump together floating particles in the water that are too small and light to sink to the bottom to be vacuumed up. Flocculants also help remove dirt from water.
