Abstracts

Flocculants and coagulants are water treatment chemicals designed to facilitate the aggregation and removal of suspended solids, colloids, and other impurities from water and wastewater; coagulants, typically inorganic salts or polymers, neutralize the charges of suspended particles to reduce repulsion, while flocculants, often high-molecular-weight polymers, bridge these destabilized particles into larger, heavier flocs that can be easily separated through sedimentation, flotation, or filtration. These chemicals are critical in applications ranging from municipal drinking water purification and wastewater treatment to industrial processes in sectors like mining, oil and gas, pulp and paper, and textiles, where they improve clarity, reduce turbidity, and aid in meeting environmental discharge standards.

The global Flocculants And Coagulants market size was estimated at USD 5235.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
