The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flooded Screw Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Flooded Screw Chiller was approximately 5,500 units, with an average selling price of about US\$42,000 per unit. Single-line capacity was approximately 300 units per year, with an average gross profit margin of 25-35%. Flooded Screw Chiller is highly efficient and energy-saving refrigeration equipment that combines flooded evaporator and screw compressor technologies. They achieve efficient heat exchange by completely immersing the refrigerant in the heat exchange tube bundle, providing a cooling source for central air conditioning and industrial process cooling. These units are highly efficient, stable in operation, low in noise, and have a low failure rate, making them widely used in large commercial buildings and various industrial sectors. Upstream core raw materials and components mainly include steel, copper, and rare earth permanent magnet materials required for compressors, as well as chips, electronic components, and refrigerants involved in the control system. Downstream applications broadly cover commercial buildings (such as large hotels and shopping malls), industrial manufacturing (such as chemical and food processing), and pharmaceutical and biological industries?sectors with stringent requirements for the energy efficiency and stability of central air conditioning systems.

The global Flooded Screw Chiller market size was estimated at USD 231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
