## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Floor Based Patients Lifters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global floor based patients lifters sales reached approximately 285 k units, with an average global market price of around US\$2,100 per unit. In 2024, the global annual production capacity of floor based patients lifters was approximately 320-350 k units, with mainstream manufacturers' single production line capacity ranging from 3,800 to 4,500 units per year. Floor-Based Patient Lifters are medical assistive devices mobile or fixed to a room's floor, equipped with a powered (electric or hydraulic) boom and sling to safely transfer and mobilize patients with limited mobility. Their core definition revolves around safety, reliability, user-friendly operation, and ergonomic design, requiring strict adherence to medical device regulations (e.g., CE, FDA certification) and load-bearing standards to eliminate the risk of injury to both patients and caregivers during transfers. From a supply chain perspective, the upstream includes suppliers of standard components (motors, hydraulic pumps, steel, controllers) and specialized parts (high-strength booms, antibacterial slings). The midstream is the core stage of device assembly, software programming, functional testing, and sterilized packaging, involving precision mechanical assembly and software integration, where a robust quality control system (e.g., ISO13485) is paramount. The downstream end-users are medical institutions such as hospitals, rehabilitation centers, and nursing homes. The procurement process is highly regulated and typically conducted through specialized medical equipment distributors or tender processes. This market is significantly influenced by healthcare policies. Suppliers require a strong network for after-sales training, maintenance, and spare parts supply, with brand reputation and clinical applicability being key competitive factors.

The global Floor Based Patients Lifters market size was estimated at USD 599.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
